QUALITY CUSTOMER SOLUTIONS

THERMAL IMAGING SOLUTIONS

AMETEK LAND OFFERS A WIDE RANGE OF ENHANCED THERMAL IMAGERS AND THERMAL IMAGING SOLUTIONS FOR INDUSTRIAL, NON-CONTACT TEMPERATURE MEASUREMENT APPLICATIONS.

Thermal imaging cameras and systems play an important role in modern industrial processing and furnace applications, meeting the increasing demands for improved product quality, process efficiency, energy saving, predictive maintenance and emissions reduction.

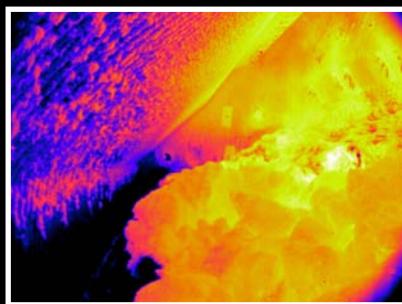

AMETEK Land provides a broad family of industrial thermal imagers and systems, covering a number of spectral bands and wide temperature ranges from 20 to 2000 °C (-4 to 3632 °F). Our products build on more than 20 years of thermal imaging experience, augmenting the market-leading range of AMETEK Land temperature measurement solutions.

Stationary cameras are used in many applications, from heavy industry to R&D across multiple markets. Depending on the different requirements of industrial processes, long-wavelength (LWIR), mid-wavelength (MWIR) and short wavelength(NIR - Near Infrared) standard models are available to cover many use cases and these form the basis for more application specific thermal imaging solutions.

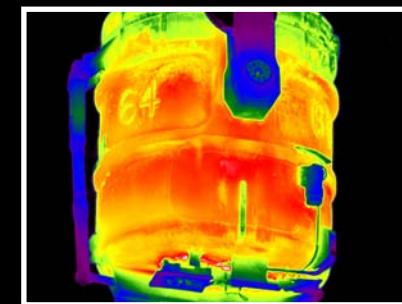

High-quality furnace borescope cameras and systems enable 24/7 temperature measurement monitoring and process control in furnace applications to prolong the furnace lifetime, continuously control the process and reduce energy consumption and emissions.

Smart imager functionalities, multiple interface and I/O options, and an integrated webserver enable the imagers to be easily integrated into new and existing process and furnaces automation systems.

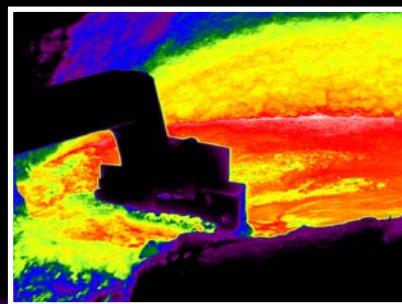

Complemented by the IMAGEPro software package – advanced image processing software for controlling, monitoring, analysing and capturing data – AMETEK Land's thermal imaging solutions cover the requirements of actual and future process imaging demands, Industry 4.0 & 5.0 communications and industrial decarbonisation.

Frame Rate	30 Hz
Optics (FOV)	31°x24°, 95°x71°
Interfacing	Gbit-Ethernet
I/O Options	I/O-modules and digital interfacing via IMAGEPro

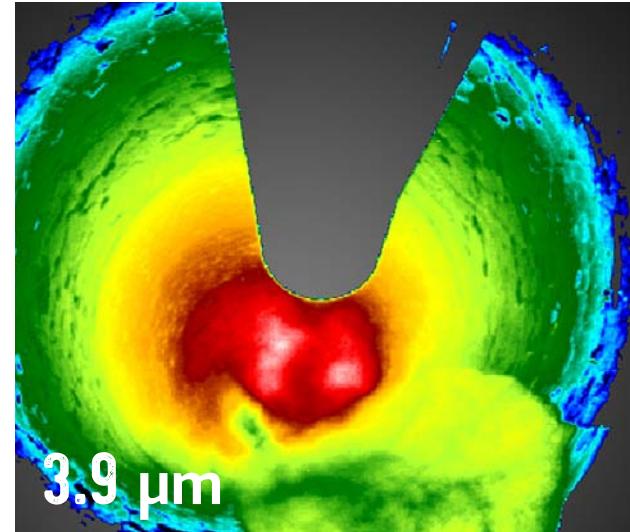

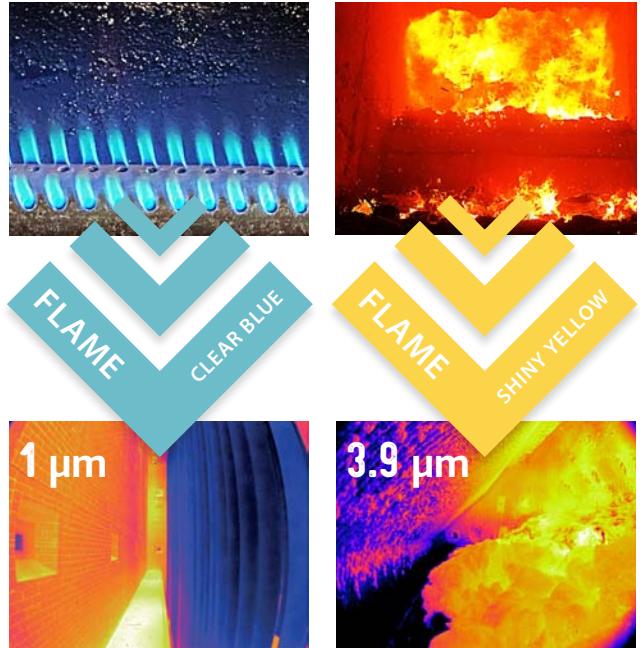

EXAMPLE APPLICATIONS

Steel Production/Caster

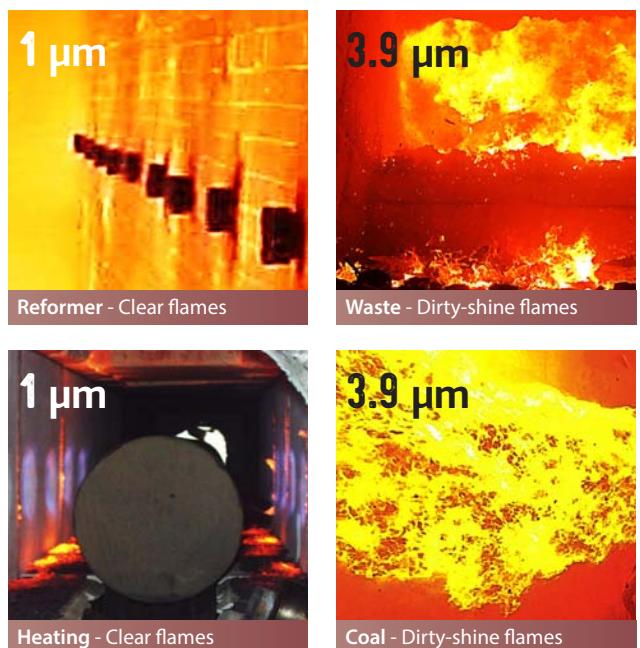

FURNACE MONITORING

SHOULD A 1 µm OR 3.9 µm BORESCOPE BE USED?

CEMENT ROTARY KILN

A 3.9 µm borescope is recommended to provide a wide and clear view through smoky and dusty atmospheres.

INDUSTRIAL FURNACES

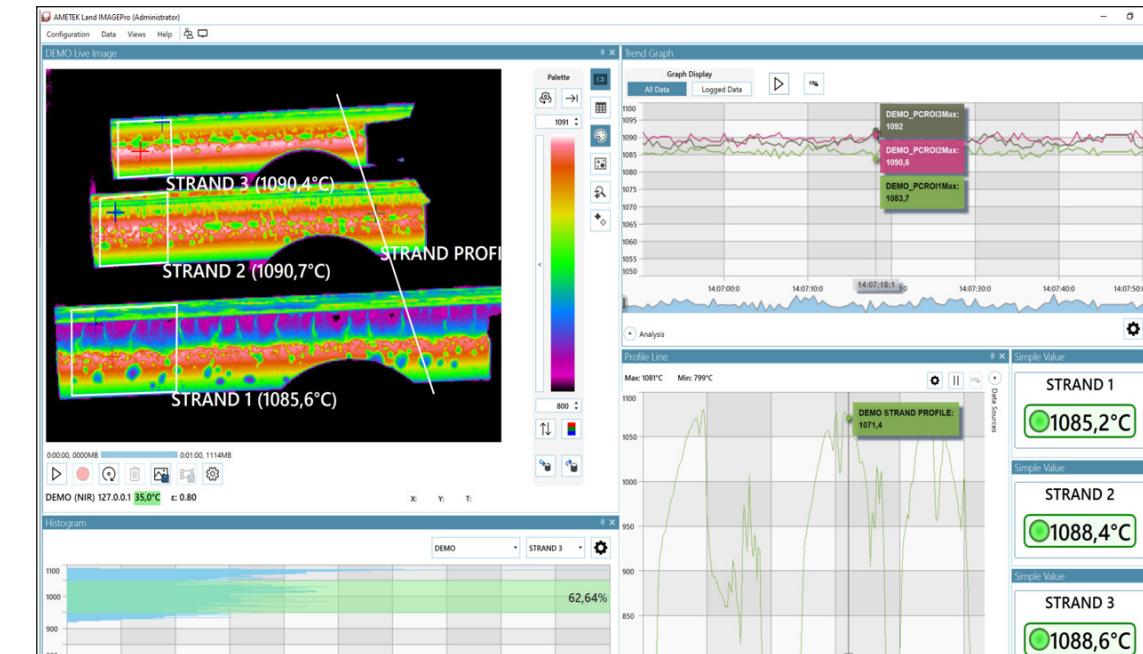

A 1 µm borescope is recommended for natural gas, oxy and hydrogen flames.

IMAGING SOFTWARE

THERMAL IMAGING SOLUTIONS

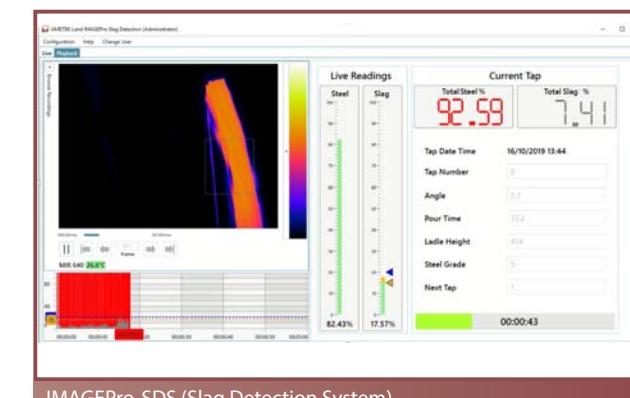

IMAGEPro

The innovative IMAGEPro package is an advanced image processing software for controlling, monitoring, analysing and capturing imager data.

IMAGEPro is a Windows PC software system that enables configuration of imager, display properties and advanced temperature analysis options and supports multiple simultaneous imagers. Free 30-day trial available for extensive testing.

APPLICATION VERSIONS

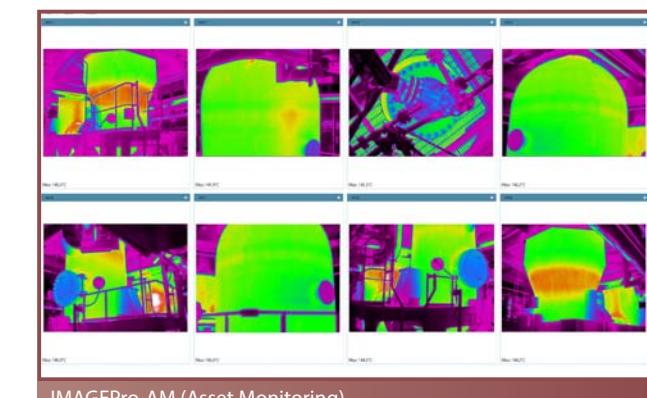

For monitoring and reducing slag carryover in steel production facilities.

FOR UP TO
16 THERMAL
IMAGERS*

*DEPENDENT ON
NETWORK CAPACITY
AND PC HARDWARE.

Able to monitor and control up to sixteen imagers, IMAGEPro offers real-time analysis for thermal imager ranges. Giving users exceptionally detailed control over their thermal imaging measurements, IMAGEPro enhances application measurements.

For monitoring of the shell temperatures of critical vessels and furnaces.

BORESCOPE AUTO-RETRACTION SYSTEMS

STANDALONE IMAGING SYSTEM

MWIR-B-640

NIR-B-640

NIR-B-656

NIR-B-2K

A typical* system includes:

- Borescope thermal imaging camera
- Water cooled/air purged housing
- Power supply unit (PSU)
- Cables (25 or 50 m)
- IMAGEPro software

NIR-B-640-EX

A typical* system includes:

- Borescope thermal imaging camera
- Water cooled/air purged housing
- Field connection box (ExHazloc)
- Control room unit (ExHazloc, associated apparatus)
- Junction box (ExHazloc)
- Cables (10, 25 or 50 m)
- IMAGEPro software

The UPS provides the power to retract the borescope should power failure occur. If the stored energy in the UPS falls to a certain level, the borescope automatically retracts.

ELECTRICAL AUTO-RETRACT (AR) SYSTEM

MWIR-B-640

NIR-B-640

NIR-B-656

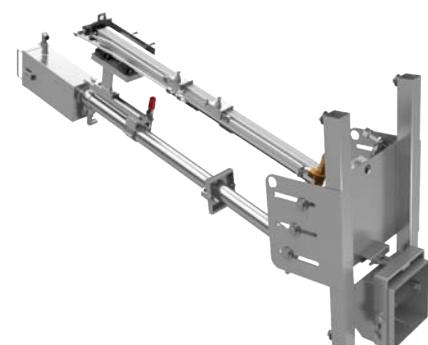

NIR-B-2K

NIR-B-2K-GLASS

A typical* system includes:

- Borescope thermal imaging camera
- Water cooled and air purged borescope tube and imager protective housing
- Pneumatic auto retraction system (24V)
- Control box (IP65 rated and includes PLC, UPS and connection terminals)
- Connection cables
- IMAGEPro software

PNEUMATIC AUTO-RETRACT (PAR) SYSTEM

NIR-B-2K-GLASS

A typical* system includes:

- Borescope thermal imaging camera
- Water cooled and air purged borescope tube and imager protective housing
- Electric auto retraction system (24V)
- Control box (IP65 rated and includes PLC, UPS and connection terminals)
- Connection cables
- IMAGEPro software

The integrated backup air cylinder provides the pneumatic energy to retract the borescope should air supply failure occur.

AUTO-RETRACT SYSTEMS PROTECT THE THERMAL IMAGING CAMERAS FROM DAMAGE BY OVERHEATING IN THE EVENT OF LOSS OF WATER FLOW, AIR PRESSURE, ELECTRICITY SUPPLY OR HIGH BORESCOPE TIP TEMPERATURE ALARM.

*Dependant on system configuration.
